

Property identification codes

When you [register as a biosecurity entity](#) you will be allocated the property identification codes (PIC) that is associated with the land where you keep your animals.

Queensland livestock owners need PICs to:

- buy [National Livestock Identification System \(NLIS\) devices](#)
- access other national systems such as [national vendor declarations or waybills](#)
- report movements to the NLIS database.

The PIC system operates nationally to allow animals to be traced throughout Australia if an animal disease outbreak or contamination incident occurs. PICs are a critical part of Australia's animal biosecurity.

How PICs are allocated

PICs are not owned by the landowner. They are allocated to the land where you keep your animals. A PIC is allocated once you are registered as a biosecurity entity. More than one biosecurity entity can be registered against a PIC.

If you do not own the property on which your animals are kept, you still need to register as a biosecurity entity. You do not need the landowner's permission to register as a biosecurity entity.

Gatton Lockyer Indoor Equestrians Pic Number is:
